professional experience

2016-current **Senior Data Scientist / Portfolio Analyst**

- Developed analytic tools, models, and software to process the natural language of text using distributional embeddings (e.g. word2vec) over the NIH grants and publication corpus.
- Analyzed grant and publication portfolios, evaluating metrics such as clinical impact, technological impact, and award rates to build quantitative comparisons between various populations.
- Architected and productionized machine learning models for classification, regression, outlier detection, and language modeling. Maintained several open-source tools used internationally.
- Restored historical texts from books, records, and PDFs into actionable data.

2014-2016 **Postdoctoral Fellowship at National Institutes of Health**

- Researched novel integration schemes for molecular dynamics simulations. Developed protein models for tertiary structure prediction from primary sequence.
- Worked in collaboration with experimentalists to test and validate models.

2011-2014 **Postdoctoral Fellowship at National Institutes of Health**

- Developed multi-scale theoretical and computational models to study protein folding, structure, and protein-protein. Derived hard-sphere models to account for crowding in biomolecular simulations and potentials to model anisotropic charge distributions.
- Managed large-scale parallel projects (1000+ cores) to simulate the cellular environment.

2005-2011 **Teaching Assistant (Drexel)**

- Organized, taught, and ran over 22 undergraduate courses, including lesson plans and curricula.
- Restructured the entire computational component for physics majors by transitioning from FORTRAN to Python.
