professional experience

2016-current

Senior Data Scientist / Portfolio Analyst

- Developed analytic tools to process the text of NIH grants and publications using distributional embeddings (e.g. word2vec).
- Analyzed grant and publication portfolios, evaluating metrics such as clinical impact, technological impact, and award rates to build quantitative comparisons between various populations.
- Architected and productionized machine learning models for classification, regression, outlier detection, and language modeling. Maintained several open-source tools used internationally.
- Designed and validated an interagency government blockchain to detect grant duplication with minimal shared data.
- Restored historical texts from books and PDFs into actionable data.

2014-2016

Postdoctoral Fellowship at National Institutes of Health

- Researched novel integration schemes for molecular dynamics simulations. Developed protein models for tertiary structure prediction from primary sequence.
- Worked in collaboration with experimentalists to test and validate models.

2011-2014

Postdoctoral Fellowship at National Institutes of Health

- Developed multi-scale theoretical and computational models to study protein folding, structure, and protein-protein. Derived hard-sphere models to account for crowding in biomolecular simulations and potentials to model anisotropic charge distributions.
- Managed large-scale parallel projects (1000+ cores) to simulate the cellular environment.

2005-2011

Teaching Assistant (Drexel)

- Organized, taught, and ran 22 undergraduate courses.
- Restructured the entire computational component for physics majors by transitioning from FORTRAN to Python.
