Data Scientist / Portfolio Analyst

- Developed analytic tools, models, and software to process the natural language of text using distributional embeddings (e.g. word2vec) over the NIH grants and publication corpus.
- Analyzed grant and publication portfolios, evaluating metrics such as clinical impact, technological impact, and award rates to build quantitative comparisons between various populations.
- Restored historical texts from books, records, and PDFs into actionable data.
- Built machine learning models for classification, regression, outlier detection, and language modeling.

2014-2016

Postdoctoral Fellowship at National Institutes of Health

- Researched novel integration schemes for molecular dynamics simulations.
- Developed protein models for tertiary structure prediction from primary sequence.
- Worked in collaboration with experimentalists to test and validate models.

2011-2014

Postdoctoral Fellowship at National Institutes of Health

- Developed multi-scale theoretical and computational models to study protein folding, structure, and protein-protein.
- Developed hard-sphere models to account for crowding in biomolecular simulations.
- Developed approximate potentials to model anisotropic charge distributions.
- Designed large-scale parallel projects (1000+ cores) to investigate results.

2005-2011

Teaching Assistant (Drexel)

- Organized, taught, and ran over 22 undergraduate courses.
- Developed lesson plans and curricula.
- Restructured the entire computational component for physics majors by transitioning from FORTRAN to Python.
